

Powder pumps additional options. NDP-40, 50 and 80

Yamada offers some additional options to upgrade your air operated diaphragm powder pump BH3.

Y-manifold:

The Y manifold providing you a better transportation because it has smaller angles. The performance can go up to **30% more** with a Y manifold.

The Y-manifold is only available in stainless steel

Reinforced center rod in combination with bolted diaphragms

Due to powder behavior, high pressure can cause bending or even braking shafts. Also deformed center disks are pretty common. With the reinforced rod + bolted diaphragms and stainless steel inner/outer discs, these problems are almost reduced to zero.
